

# Hüseyin Ergün

## Summary

Computer Science graduate from Dokuz Eylül University with a focus on Fullstack Development. Experienced in building scalable web applications using the MERN stack and .NET ecosystem (ASP.NET MVC, Entity Framework). Passionate about integrating AI-driven solutions into software workflows and developing user-centric, high-performance systems. Proven ability to manage end-to-end project lifecycles, from database design to modern UI implementation.

## Experience

### SoftNET Yönetim Bilgi Sistemleri

Back-End Developer Intern July 2024 - August 2024

## Education

### Dokuz Eylül University

Computer Science 2020 - 2025

## Projects

### ReserveAI | AI-Powered SaaS Appointment Automation

Live Demo: [reserveai-cckb.onrender.com](#)

- Engineered an automated system using MERN Stack and Groq (Llama 3.3) for high-speed natural language processing and intent classification.
- Architected a secure backend with HTTP-Only Cookies and SameSite configs to prevent XSS/CSRF in cross-origin environments.
- Optimized system resilience via n8n and Railway automation, reducing manual intervention by 80% through asynchronous workflows.
- Tech Stack: Node.js, React, TypeScript, MongoDB, LLMs (Groq/Llama 3.3), n8n, Railway, Luxon.

### NexPos | Fullstack POS & Inventory Management System

Live Demo: [nexpos-app.vercel.app](#)

- Developed a comprehensive Point of Sale system using the MERN stack to digitize retail operations.
- Implemented core business logic including real-time stock tracking, dynamic invoice generation, and category-based product management.
- Designed a responsive UI with dark mode support and optimized complex application state.
- Tech Stack: MongoDB, Express.js, React, Node.js, Redux Toolkit, Tailwind CSS.

### Fintrack | AI-Powered Financial Management & Invoicing Platform

Live Demo: [fintrack-app-six-sand.vercel.app](#)

- Built a full-stack SaaS accounting platform enabling businesses to create invoices, track expenses, and monitor cash flow with real-time dashboard analytics.
- Engineered an AI-driven receipt scanning feature using Groq (LLaMA 3.3) and Cloudinary, automating expense data extraction and eliminating manual entry.
- Architected a secure backend with HTTP-Only cookies, JWT refresh token rotation, and SameSite CSRF protection for cross-origin deployments.
- Optimized first-load performance via a combined /dashboard/all API endpoint and a DB warmup pattern, reducing cold-start latency by 3-4 seconds.
- Tech Stack: Next.js 14, NestJS, TypeScript, PostgreSQL (Neon), Prisma, React Query, Tailwind CSS, Groq AI.

## Skills

### Languages

- C#
- C
- JavaScript (ES6+)
- TypeScript

### Frontend

- React.js
- Redux Toolkit
- Tailwind CSS
- Next.js
- Bootstrap
- HTML5
- CSS3

### Backend

- Node.js
- Express.js
- Nest.js
- Prisma ORM
- ASP.NET MVC
- Entity Framework
- RESTful APIs

### Databases

- MongoDB
- MS SQL Server
- PostgreSQL

### Tools & Technologies

- Git & GitHub
- Postman
- n8n (Automation)
- AI Integration (LLMs)
- JWT
- Cloudinary
- Vercel / Render (Deployment)

## Languages

English (B2)
